HAFENI NGHIDINWA

IT Project Manager · Data Platforms, Integrations & Document Automation

PROFILE

Calm, patient and dependable IT Project Manager with nearly 3.5 years in Switzerland delivering data platforms, system integrations and document automation with teams in Switzerland and India. What drives me is seeing an idea take shape: I picture the whole system before we build it, and I enjoy the hard problems on the way. I lead with the human side first and keep a high standard on quality. I am looking for a role in project management, business analysis or platform and data management.

HOW I WORK

- **People first:** I explain with patience until everyone has the full picture, give the team what they need and handle stakeholder pressure so they can focus.
- **Calm and safe, with high standards:** I create a team where people can speak openly, and I care how colleagues are doing beyond the task.
- **Structure early:** clear requirements and planning, so there are no last-minute surprises.
- **What I value:** openness, empathy and trust. Blame, micromanagement and talking behind backs are not my style.

PROFESSIONAL EXPERIENCE

IT Project Manager

06/2023 – present

Multi-Concept Group AG — Schwyz · Builds websites, funnels, automations, internal software and AI agents for service-based businesses; part of the Liberty Vorsorge AG group since 2024

- Manage several concurrent client projects with approx. 30 developers, testers and designers in India and 8 colleagues in Switzerland. I train people hands-on until the details are right, e.g. layout and spacing on every form.
- Own requirements, specifications, user acceptance testing and release sign-off; first point of contact for client escalations.

Concurrent client and group projects within this role

Client project: **Logista / Fachgemeinschaft DIE MEISTER — Automated invoice processing** (2023 – present)

- Led the replacement of the invoice platform of a B2B marketplace with over 700 suppliers and over 600 customers (Magento/Talend → Spring Boot, SFTP), incl. a live cut-over with no data loss.
- Results: 80% faster processing, capacity doubled to **1,200+ invoices per day**, error rate from ~15% to **under 0.5%**.
- Defined the invoicing and seller-validation rules, which the developers coded in the Spring Boot backend; supplier and customer master data is managed in Zoho CRM.
- Designed a ruleset interface that lets client staff maintain rules themselves, and automatic routing of trusted suppliers straight to XML/SFTP.
- Manage the development and invoice verification teams; first point of contact for the client on incidents and new requirements.

Client project: **Swiss association management firm — Statistics platform migration** (2026 – present)

- Responsible for data management in the migration of a legacy statistics platform to Pimcore (approx. 15 mandates, 300+ member companies).
- Coordinated the developers in migrating **19,000+ historical periods**, reconciled with the source with **zero differences**.
- Designed a 4-phase rules architecture (plausibility, aggregation, confidentiality, publication); ran client workshops with live demos.
- Ensured period statuses and company mergers were migrated 1:1, so no company is counted twice.
- Translated the client's Excel reports into report structures for 5 statistics and defined a role concept with 6 roles.

CERTIFICATIONS

IBM IT Project Manager
CompTIA DataSys+ ce
Pimcore Consultant
Pimcore Enterprise Developer
SAP (certification during studies)

INTERESTS

Hiking: nature calms me down
Reading every day
Rock climbing · Pottery · Cooking
Tech and world news
Next goal: cycling

Group project: **Prefex (Liberty Vorsorge AG) — Comparison platform for 2nd and 3rd pillar (BVG) investment products, prefex.ch** (2025)

- Managed the build of the Pimcore-based platform through Releases 3–5: fund search and filters, fund detail pages, comparison lists, the user onboarding flow and a logged-in watchlist area with the latest fund data and currency rates.
- Led the team that added fund providers and partners in the Pimcore backend and maintained fund documents and factsheets for strategy funds, pure investment funds and asset management mandates.
- Coordinated automated daily fund-data imports, code versioning on GitHub and releases to production; held weekly meetings with developers and the client.

Group project: **Lealta / Liberty pension foundations — Forms management in Pimcore** (2026)

- Create forms in Pimcore that are generated automatically as PDFs, build objects such as partner profiles and manage content in Pimcore.
- Test and validate the multilingual forms (DE/EN/FR/IT) against the originals for content, legal text, fields and translations; trace recurring errors to shared modules.
- Train the team to create forms, guide them and provide ongoing support.

Administrative Assistant
04/2019 – 01/2022

Frampton Investments Limited — Windhoek, Namibia

- Managed sales-channel data, analysed help-desk tickets and provided first-line IT support.

IT Analyst Intern
06/2018 – 12/2018

Roads Authority of Namibia — Windhoek, Namibia

- Maintained tariff data in Microsoft Dynamics (ERP) and provided first-line ERP support.
