HAFENI NGHIDINWA

Data Analyst · Data Management & Data Migration

PROFILE

Calm, patient and dependable data professional with nearly 3.5 years in Switzerland in data management, data migration and business applications. I define the rules that keep data correct, coordinate migrations with developers and check results with SQL and Zoho Analytics. What drives me is seeing structure appear in messy data, and a migration that matches to the last number. I am looking for a role in data analysis, master data management or data migration.

HOW I WORK

- **People first:** I explain with patience until everyone has the full picture, and I see users and colleagues as people, not tickets.
- **Calm and safe, with high standards:** I create a team where people can speak openly, and I care how colleagues are doing beyond the task.
- **Structure early:** clear requirements and planning, so there are no last-minute surprises.
- **What I value:** openness, empathy and trust. Blame, micromanagement and talking behind backs are not my style.

PROFESSIONAL EXPERIENCE

IT Project Manager

06/2023 – present

Multi-Concept Group AG — Schwyz · Builds websites, funnels, automations, internal software and AI agents for service-based businesses; part of the Liberty Vorsorge AG group since 2024

- Responsible for data structures, data quality and data flows in several concurrent client projects with developers in India and Switzerland.
- Manage client data in Zoho CRM, prepare it with Zoho DataPrep and build dashboards in Zoho CRM and Zoho Analytics.
- Write data and reporting requirements, specifications and acceptance criteria, and test data before go-live.

Concurrent client and group projects within this role

Client project: **Swiss association management firm — Statistics platform migration** (2026 – present)

- Responsible for data management in the migration of a legacy statistics platform to Pimcore (approx. 15 mandates, 300+ member companies).
- Coordinated the analysis of an undocumented legacy database (180+ tables, 14M+ data cells) and the migration of **19,000+ historical periods**, reconciled with **zero differences**; defined the source-to-target mapping.
- Defined plausibility, aggregation and confidentiality rules and reviewed import results for data errors.
- Ensured period statuses and company mergers were migrated 1:1, so merged companies are not counted twice in the statistics.
- Translated the client's Excel reports into internal and external report structures for 5 statistics, and defined a role-based access concept with 6 roles.

Client project: **Logista / Fachgemeinschaft DIE MEISTER — Invoice data platform** (2023 – present)

- Defined the data and validation rules for an invoice platform with over 700 suppliers and over 600 customers (seller matching by VAT number, postcode and street); the developers coded them in the Spring Boot backend.
- Supplier and customer master data is managed in Zoho CRM and used for automated validation.
- After the platform replacement: capacity doubled to **1,200+ invoices per day**, error rate from ~15% to **under 0.5%**, no data loss.
- Analyse processing logs to find and resolve data errors (duplicates, credit notes).
- Specified the logging and audit trail (mail, processing and admin logs) so every document can be traced end to end.

CERTIFICATIONS

CompTIA DataSys+ ce
IBM IT Project Manager
Pimcore Consultant
Pimcore Enterprise Developer
SAP (certification during studies)

INTERESTS

Hiking: nature calms me down
Reading every day
Rock climbing · Pottery · Cooking
Tech and world news
Next goal: cycling

- Defined automatic routing of trusted suppliers straight to XML/SFTP without manual review, as part of an 80% automation target.

Group project: **Prefex (Liberty Vorsorge AG) — Comparison platform for 2nd and 3rd pillar (BVG) investment products, prefex.ch** (2025)

- Oversaw the Pimcore data model for strategy funds (BVV2), pure investment funds and asset management mandates, incl. the data behind the search filters (TER, equity share, currency, performance).
- Led the team that set up fund providers and partners in Pimcore and maintained fund documents and factsheets (e.g. Liberty BVG Fund Invest).
- Coordinated daily fund-data imports via FTP and cron jobs and a live CHF/EUR/USD exchange-rate API feeding the users' watchlists.

Group project: **Lealta / Liberty pension foundations — Forms management in Pimcore** (2026)

- Create forms in Pimcore that are generated automatically as PDFs, build objects such as partner profiles and manage content in Pimcore.
- Test and validate the multilingual forms (DE/EN/FR/IT) against the originals for content, legal text, fields and translations; trace recurring errors to shared modules.
- Train the team to create forms, guide them and provide ongoing support.

Administrative Assistant
04/2019 – 01/2022

Frampton Investments Limited — Windhoek, Namibia

- Managed sales-channel data, analysed help-desk tickets and provided data analysis for operational decisions.

IT Analyst Intern
06/2018 – 12/2018

Roads Authority of Namibia — Windhoek, Namibia

- Maintained tariff data in Microsoft Dynamics (ERP) and provided first-line ERP support.

EDUCATION

German language course, level B1
2026 – present

AVS – Die persönliche Sprachschule — Baden · A2 completed; currently attending B1

Bachelor of Informatics
2019

Namibia University of Science and Technology — Windhoek · Focus: data and business analysis
